PRINCIPLE OF OPERATION

Bloom - an automated trading system on the foreign exchange market, primarily designed for trading the XAUUSD pair (Gold/US Dollar).

When the price moves in the desired direction, the advisor locks in profits according to a predefined algorithm. If the price moves towards a loss, the system analyzes opportunities to improve the average position price in order to secure profits at the early stages of a trend reversal. Thus, the system is prepared for various market movements.

Numerous tests have confirmed the reliability of the Bloom algorithm on the most challenging and dangerous sections of the forex market chart. The minimum investment amount to ensure proper operation is 1,000 dollars.
